

This chart is simply a guide to converting from trade name to generic name, and vice versa. It is not intended as a guide as to what medication should be used for the treatment of any particular child or constellation of problems and does not constitute medical advice. The order of medications within each cell is random and does not imply their frequency as the prescribed medication or their efficacy; many of these medications have not been researched on children or adolescents.

The trade names are the U.S. trade names.

For	U.S. Trade Name	Generic Name
TICS	<ul style="list-style-type: none"> ▪ Haldol ▪ Orap ▪ Prolixin ▪ Risperdal ▪ Catapres ▪ Klonopin ▪ Tenex ▪ Seroquel ▪ ----- ▪ Nitoman ▪ Permax[†] ▪ ----- ▪ Navane ▪ Inversine ▪ Zeldox ▪ Cognex ▪ Zofran ▪ BoTox ▪ Abilify 	<ul style="list-style-type: none"> ▪ haloperidol ▪ pimozide ▪ fluphenazine ▪ risperidone ▪ clonidine hydrochloride ▪ clonazepam ▪ guanfacine hydrochloride ▪ quetiapine fumarate ▪ sulphuride (not approved in U.S.) ▪ tetrabenazine ▪ Pergolide (experimental) ▪ Nicotine Patch ▪ Thiothixene ▪ Mycameline (experimental) ▪ ziprasidone (not approved yet) ▪ tacrine (experimental) ▪ odansetron hydrochloride ▪ botulinum toxin ▪ aripiprazole
